Fluoride protects the smooth surfaces
Sealants protect the chewing surfaces

Fluoride and Sealants Together
Protect the Entire Surface of the Tooth from Decay

Sometimes nice smiles need extra protection from tooth decay.
Dental sealants prevent decay.

For Total Protection From Decay:
- Get dental sealants if needed
- Make sure you’re getting fluoride
- Brush and floss every day
- Eat a nutritious diet
- Visit your dentist regularly

What are dental sealants?
Dental Sealants are thin plastic coatings that cover the chewing surfaces of back teeth. These back teeth are called molars. Sealants protect molars from decay.
